The Only Complete AED Program

... Are You Prepared?

You require peace of mind. Peace of mind that comes with knowing your organization is fully prepared for Sudden Cardiac Arrest (SCA).

When SCA strikes, seconds matter. Having Automated External Defibrillators (AEDs) accessible and ready for use by trained volunteer rescuers is the best solution.

The difference between saving a life and losing one to SCA can be preparedness.

Are there enough AEDs available?

Are they ready?

Are they working?

Are enough people trained?

Are you prepared?

Deploying and maintaining an AED Program can be a full-time job. And the challenges only magnify across a national or international enterprise.

As the leading global provider of customized AED Programs, En-Pro understands the complexities of AED Program implementation and assessed risk. En-Pro implements programs worldwide and partners with many organizations – from local churches to factories to Fortune 500 companies – to provide peace of mind from Day One.

What is a Comprehensive AED Program?

Design

- A careful site analysis so that AED placement is optimized for a quick response.

Implement

- A system of checks and balances that governs the use of AEDs within an organization.

Maintain

- Medical oversight and authorization; proper policy and procedure; notification with local, state, and federal authorities; and a support system to monitor ongoing AED Program compliance.

- Ongoing AED/CPR training with a support system that maintains, monitors, and tracks program compliance and efficacy.

Once You Commit to an AED Program, En-Pro Does the Rest.

En-Pro provides your organization with expert, professional service – from the first contact through full deployment - ensuring your AED Program is 100% compliant.

En-Pro makes this pledge with the understanding that each client partner is unique. Through the three phases of AED Program development – designing, implementing, and maintaining – En-Pro ensures your customized program is not only fully compliant but also prepared to save lives.

Design

During the design phase, En-Pro:

- Completes an analysis of designated sites for optimal AED placement.
- Reviews state and regulatory requirements along with any local ordinance that may exist to govern AED installations within a city, county, or township.
- Develops a policy and procedure tailored for your organization.
- Creates an implementation schedule that identifies milestones of completion for your AED Program, including training dates.

This process establishes a standardized approach to guaranteeing compliance that decreases your risk.

Implement

Once your program is designed, En-Pro provides rapid and efficient implementation. When your AEDs arrive, they are registered with En-Pro's PlusTrac™ AED Program Management application, as well as EMS agencies, 911 call centers, and any agency required for compliance.

Training is Vital

Organizations implementing AED Programs must train employees as volunteer responders and certify them for cardiopulmonary resuscitation (CPR) and AED usage.

En-Pro understands proper training is crucial to any Program success. En-Pro offers a range of training options utilizing qualified professional educators – clinicians and emergency medical personnel – providing the highest-quality training possible.

Maintain

To ensure ongoing preparedness, En-Pro provides the most comprehensive protocols that continually monitor overall compliance and readiness.

Designed solely for AED Programs, PlusTrac™ is an innovative, interactive, web-based AED Management System.

PlusTrac™ automation allows for better oversight, making the process simple, more efficient, and less time-intensive.

Plus Trac™

- ✓ Enables automatic notifications to appointed program personnel
- ✓ Encourages proper accountability
- ✓ Guarantees ongoing compliance

With a single click, PlusTrac™ provides a strategic view of the overall status of your AED Program. PlusTrac™ allows you to make quick evaluations and easily:

- ☐ Record maintenance checks of AED devices.
- ☐ Run compliance reports that help manage the Program and personnel.
- ☐ Track consumable items such as batteries and electrodes to ensure AED device readiness.
- ☐ Manage volunteer responders at each site and see when it is time to renew certifications.
- ☐ Make changes, such as removing or adding new AEDs.

Sudden Cardiac Arrest: The Facts

- SCA is an abrupt disruption of the heart's normal function. It causes an unnatural rhythm that prevents the heart from pumping blood to the brain and vital organs.
- Brain death and permanent death can occur in just four to six minutes after someone experiences sudden cardiac arrest.
- SCA is the leading cause of unexpected death in the world and strikes without warning. Regardless of age, gender, or race ... even those who seem in good health.
- When someone collapses from SCA, immediate cardiopulmonary resuscitation (CPR) and use of an AED are essential for any chance of recovery.

The En-Pro Difference

En-Pro Management Inc. created a unique and comprehensive approach to the design, implementation, and ongoing maintenance of AED Programs that is proven worldwide.

En-Pro is the industry expert in understanding and simplifying the complexities of implementing AED Programs.

Through superior support and the most robust interactive AED Program Management application available today, En-Pro provides you with total AED Program success.
